- Use of scaffolding.
- Control of scaffolding.
- Theoretical training in the use of fall protection.
- Control of scaffoldingmaterial.
- Documentation.
- 15 hours of practical training by a competent person.

regulatory requirements

The Norwegian Government introduced new rules regarding working in height on the January 1, 2016 The most important change was requirements for scaffolders: Chapter 17 in the regulations on the execution work which is now revised. Training of scaffolders are divided per the scaffolding height. Scaffolders that building scaffolding over 2 meters must undergo the appropriate training. The training will reveal the workers' ability to assess the condition and needs for maintenance regarding the scaffoldingmaterial.

According to the "regulations on the execution of work" no. 1357, §17-5, the employer must ensure that workers using scaffolding as work platform to carry out work at height, have had proper training in the using the scaffold, including review Guide for the Assembly, use and dismantling, j § 17-8 second paragraph. Adequate training should be given before work is initiated.
